RE: 19400 136th Ave. NE Proposed Plat

This is our driveway, which borders the Woodland subdivision, and is directly across the street from the proposed plat.

This is the steep incline from the proposed plat entrance down to Little Bear Creek and Highway 522.

This is the proposed plat entrance viewed from our driveway. The narrow wooded strip gives way to a steep drop-off to the creek

This is the view from Highway 522, which borders the proposed plat on the immediate eastern side.

These are sockeye salmon spawning in Little Bear Creek this fall. This is from the viewing platform on the boardwalk at Rotary Park.

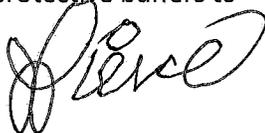

We urge the City of Woodinville to do everything possible to protect this narrow and fragile, but priceless band of natural habitat. With the freeway noise and pollution bordering so closely on the east, we ask that no further incursion be made in the protective buffers to the west.

Jeff and Betty Pierce

This is not a homeless man, but rather a proud citizen of Woodinville. I try to walk Rotary Park every possible morning and I pick up litter in the park and along the High School sidewalk as I walk. This particular morning, the haul even included a Pet Smart shopping cart!

We call for responsible stewardship of the highest standard of our natural resources from all citizens of Woodinville and look the City of Woodinville for leadership in setting this standard! Thanks for all that you do.....
