Dee,

If there has to be a fence around the facility, it should be the black vinyl coated chain-link type of fence with three strands of barb wire along the top.

Thanks,
KMcD

Hi Ken,
Kyle has a couple of questions for you below.

Thanks,
Dee

Hi Dee,

Did Ken determine if the district has any preference on fence type around the lift station and the tract? We have a hearing with the city on another item tomorrow and would like to make sure we have this answer. Any chance he made it through the lift station review? Thanks

Yes, I'll ask him how it's going when he gets out of his meeting.

Thanks. Is Ken still working through the plans this week? We are anxious to get the construction started on this. Thanks again for your help on this.

Kyle,
I don't think we have any preference, as long as we have access to the facility, unless you've been directed differently from Ken. I think the screening requirement comes from the City. But I will confirm with Ken once he is out of his meeting.

Dee

Hi Dee,

Currently we are showing a 6' black vinyl chainlink fence around the lift station tract with landscape screening around it. I may need to discuss the type of fencing further with the City of Woodinville. Would the district allow/accept a wood fence around the lift station tract with landscaping screening? It would be helpful to know what the WWD requirement is when talking with the city. Thanks
